**ONSOLVE®**

How OnSolve Helps Federal Agencies Strengthen Resilience

FedRAMP

OnSolve® is committed to helping federal government agencies enhance their resilience. As an authorized Federal Risk and Authorization Management Program (FedRAMP®) provider, you can be confident we'll support the success of your mission around the clock.

FedRAMP® enforces a standardized approach to security authorizations for cloud service offerings for federal agencies. At OnSolve, our internal security practices are based on ISO 27001, which is recognized as the highest standard for an information security management system. Our data centers provide the utmost in confidentiality, system redundancy and user support. Every solution we offer is designed to ensure your agency maintains security and operational continuity while developing the resilience it takes to prevail in today's complex threat landscape.

Agencies such as [NASA](#) and the DoD rely on OnSolve to streamline communications, safeguard confidentiality, maintain accessibility and enhance mission readiness.

5 Ways OnSolve Helps Federal Agencies Strengthen Resilience

1 FedRAMP Authorization

When agencies utilize a FedRAMP authorized platform, they save valuable time, cost and effort while achieving a consistent level of security. OnSolve follows rigorous standards for safety, security and agility in each deployment, so you receive the most reliable services. Choosing an authorized system simplifies the buying process by removing the need to conduct your own security assessments. A cloud-based solution improves IT security and enhances agility so you can combat a vast environment of dynamic risk.

2 Speed

The OnSolve Platform for Critical Event Management automates the process of sending alerts to internal teams so you can activate incident response processes faster and more efficiently. It also integrates with other internal systems, reducing duplicative efforts and keeping everyone updated in real time. When every second counts, the ability to rapidly define successful outcomes puts time back on your side.

3 Relevance

With OnSolve technology, the right people receive the right information at the right time. You can target alerts to specific users in the sphere of impact based on location address or geographic descriptors, mission parameters such as threat level, individual identifiers including role, team, rank and security clearance, and a host of other conditions. In addition, messages can be translated into 29 languages, so recipients are more likely to understand and take action.

4 Usability

Our platform was designed with an intuitive interface to reduce the stress of communicating during crises. Alert templates can be created in advance and modified at a moment's notice with just a few clicks. This further reduces the cognitive load during crisis and keeps everyone informed via rapid dissemination of information. OnSolve makes contact management effortless by utilizing open an API, data sync and seamless integration with existing interagency systems. Our internal account portal and self-update reminders automatically prompt users to keep their contact information current.

5 Integration

Risk Intelligence is securely integrated into the OnSolve Platform. Our powerful AI engine monitors a global network of human-validated data sources and correlates the resulting intelligence to your agency's footprint. This capability ensures the information you receive is targeted and filtered, so noise doesn't interfere with your decision-making process. Adding AI-powered risk intelligence takes speed, relevance and usability to the next level so your agency achieves overall resilience. Vigorous risk management capabilities mean you can take the high ground — that's the best position to protect your people, places and property.

Now your agency has options — why settle for anything less than optimal?

Take your agency's resilience further and make mission success a reality with the FedRAMP-authorized OnSolve Platform.

About OnSolve

OnSolve® proactively mitigates physical threats, allowing organizations to remain agile when a crisis strikes. Using trusted expertise and reliable AI-powered risk intelligence, critical communications and incident management technology, the OnSolve Platform allows organizations to detect, anticipate and mitigate physical threats that impact their people and operations.
