

How OnSolve Helps Federal Agencies Strengthen Organizational Resilience

OnSolve® is committed to helping federal government agencies enhance their organizational resilience. Now that we're authorized by the Federal Risk and Authorization Management Program (FedRAMP®), you can choose your provider faster and with greater confidence than ever before.

FedRAMP® enforces a standardized approach to security authorizations for cloud service offerings for federal agencies. Our internal security practices are based on ISO 27001, which is recognized as the highest standard for an information security management system. In addition, our data centers meet standards for security, environmental protection and availability. At OnSolve, confidentiality, integrity, availability and resilience are an integral part of every solution we offer.

NASA relies on OnSolve to streamline communications and deliver confidentiality, integrity, availability and resilience.

5 Ways OnSolve Helps Federal Agencies Strengthen Resilience

1 FedRAMP Authorization

When agencies utilize a FedRAMP-authorized solution, they save valuable time, cost and effort while achieving a consistent level of security. OnSolve follows rigorous standards for safety, security and agility in each deployment, so you receive the most reliable services. Choosing an authorized system simplifies the buying process by removing the need to conduct your own security assessments. A cloud-based solution improves IT security and enhances agility so you can combat a vast environment of dynamic risk.

2 Speed

The OnSolve Platform automates the process of sending alerts to internal teams so you can activate incident response processes faster and more efficiently. It also integrates with other business systems, reducing duplicative efforts and keeping everyone updated in real time. Our advanced technology aggregates human-validated data streams for instantaneous analysis. When every second counts, the ability to rapidly define successful outcomes puts time back on your side.

3 Relevance

With OnSolve technology, the right people receive the right information at the right time. You can send alerts to only those in the sphere of impact, based on geographic location, work role/team, building floor and a host of other specifications. In addition, messages can be translated into 29 languages, so you can be confident your message will always be understood.

4 Usability

Our platform was designed with an intuitive interface to reduce the stress of communicating during a crisis. Alert templates can be created in advance and modified at a moment's notice with just a few clicks, further reducing the cognitive load during the crisis and keeping communities informed via rapid dissemination of information. OnSolve also makes contact data management effortless by integrating with existing HR systems. Our internal account portal and self-update reminders keep contact information current.

5 Secure Risk Intelligence Integration

Securely integrated into the OnSolve Platform is our Risk Intelligence product. OnSolve monitors a global network of human-validated data sources and correlates to your agency's footprint. This capability ensures the information you receive is targeted and filtered, so noise doesn't interfere with your decision-making process. Adding AI-powered risk intelligence takes speed, relevance and usability to the next level so your agency achieves a foundation of resilience. Vigorous risk management capabilities mean you can take the high ground — and that's the best position to protect your people, places and property.

Now, your agency has a choice.
