

Create Mission Resilience With the **OnSolve Platform**

Strengthen Agency Stability and Sustain Operational Continuity

Critical events can occur in the blink of an eye. Federal agencies need state-of-the-art technology and expertise on their side to effectively anticipate, prepare, respond and adapt when their mission is threatened. As the risk landscape becomes more dynamic, agencies increasingly face simultaneous incidents and cascading events. While civil unrest, domestic terrorism, natural disasters, cyber attacks and IT disruptions demand attention, leaders must maintain operational continuity and personnel safety.

Survival isn't enough. Today's agencies need a way to thrive in the face of crisis. Digital transformation can make it happen. A system with integrated AI-powered risk intelligence, historical reporting, critical communications and incident management is more than an advantage — it's a must. The OnSolve[®] Platform for Critical Event Management delivers one over-arching operating picture to facilitate seamless risk mitigation. When you have 360-degree visibility, you can make informed decisions, shift resources and optimize performance.

Risk Intelligence

Gain situational awareness and a comprehensive understanding of what's happening in your world. Context is everything — our AI-powered engine combined with analyst verification puts relevant events on your radar. Now you can easily identify which of your assets might be at risk.

Critical Communications

Launch rapid alerts in multiple languages to agents in the field, personnel, residents and other key stakeholders. Reach recipients via mobile app, SMS, email, phone and more.

Incident Management

Improvise, adapt and overcome when every second counts. Assess areas of impact in real time to determine order of prioritization and strategy, so you can activate and synchronize your response teams for maximum effect.

How can OnSolve help federal agencies strengthen resilience?

As an industry leader, OnSolve has distinguished itself from other critical event management providers. Each core product is thoroughly integrated into the platform to deliver a cohesive user experience. It monitors a global network of data sources to provide analyst-validated intelligence on the full spectrum of natural disasters and man-made critical events. The output is correlated to your agency's footprint to help you make faster, more informed decisions that lead to measurably improved outcomes. Here's how:

Detect

OnSolve AI continuously scours a global network of proprietary and publicly available data sources that go through continual vetting and verification. Our machine algorithms carefully review the news, ingest data and scan social media to detect physical threats. Our AI then labels each event, places it in time and space, validates accuracy and rates severity.

Correlate

OnSolve works with you to define the footprint of your agency and identify the factors that matter most. After physical threats are detected, validated and added to the system by AI, you receive an analysis of how those events correlate with your operations and objectives. This enables you to see the potential influence of relevant critical events on your overall mission integrity, as well as agency reputation.

Communicate

OnSolve AI translates raw data into usable intelligence and aggregates it to detect trends, patterns and emerging threats. By reducing the noise of irrelevant data, it ensures the right people get the right information at the right time. Our multichannel communications platform delivers actionable intelligence to keep agents informed and connected while enhancing the effectiveness of the decision-making process.

When every second counts and the continuity of government operations is on the line, OnSolve delivers the solution that puts control back in your hands, at click-speed.

OnSolve meets and exceeds expectations in these areas by accurately detecting, correlating and communicating domestic and global threats. When federal agencies have the resources they need to build and strengthen resilience they can bolster unit cohesion, maintain operational continuity and enhance mission success, all while protecting their people, places and property.

Check out these competitive facts:

Speed: Up to 10 physical threats can occur every minute

OnSolve Risk Intelligence detected more than nine million physical threats, from 2021 to 2022, using AI and analyst-vetted information.

Relevance: Up to 99% more relevant global risk alerts

With custom filtering and criteria, OnSolve reduced the potential “noise” of 16,500 events down to 20 critical event alerts for a large organization.

Usability: Scalable to meet any agency's needs

From user-friendly functionality to more advanced and complex workflows, OnSolve easily scales to meet any agency size and capability requirements.

Physical threats pose an extreme challenge to an agency's ability to execute on its mission, maintain day-to-day operations and keep people safe. Optimize your ability to detect, respond and protect with the OnSolve Platform.

About Us

OnSolve® offers award-winning critical communications products that enable enterprise, government and business-wide agility during daily operations and times of disruption through integrated technology and expertise. Organizations of all sizes and types can quickly distribute both routine information and emergency alerts to large numbers of people on virtually any device. As pioneers of the mass notification industry, OnSolve sends billions of alerts annually with proven support for both the public and private sectors.

We provide open cloud-based communication solutions that allow users to initiate alerts from any location, synchronize contact data and combine alerting functionality with other existing business systems, removing manual processes and improving efficiency. This provides users with the right information to share with the right people at the right time — so they can mitigate risk, strengthen organizational resilience and better protect their people, places and property. Visit www.onsolve.com.

The OnSolve Platform is FedRAMP® Authorized and available in the marketplace. Customers including the Tennessee Valley Authority, select DoD agencies and NASA use OnSolve to strengthen their resilience.
